

## CLAIMS

1. A mirror device for a vehicle, comprising:

a hollow shaft that is provided with a mirror base fixed to a vehicle

5 body;

a housing which houses a motor for swinging a mirror unit between a use position and a fold position and is turnably supported by the shaft penetrating the housing; and

a cover for covering the housing to thereby seal an inside of the

10 housing,

wherein in the cover includes a cylindrical portion which extends in the axial direction of the shaft and engages with the outer surface of the shaft when the shaft is inserted, and an end portion cover which bends toward the shaft from a tip of the cylindrical portion and covers a

15 penetration end surface of the shaft.

2. The mirror device for a vehicle according to claim 1, wherein a tip of the cylindrical portion is inclined toward the shaft in a free state.

20 3. The mirror device for a vehicle according to claim 1, wherein an O-ring is interposed between the cylindrical portion and the shaft.
